PROFESSIONAL SUMMARY

Technical Project Coordinator with 2+ years of hands-on experience coordinating IT projects and cross-functional teams using Agile methodologies. Expert in bridging the gap between technical complexity and business impact, translating developer language into stakeholder value.

What drives me: The challenge of coordinating technical projects where every day brings new problems to solve, new team dynamics to navigate, and new opportunities to learn. Software projects are my sweet spot—complex, technical, and thrilling. They require someone who can speak both developer and stakeholder, someone who sees knowledge gaps as invitations rather than roadblocks.

My approach: Over the past two years coordinating IT and software development initiatives, I've learned that the most valuable skill isn't knowing everything—it's being curious about everything. When I don't understand something, I ask until I do. When teams approach problems differently, I find the thread that connects them. When technical jargon threatens to derail stakeholder alignment, I translate it into business value.

Track record:

- Coordinated Agile teams at Accenture, achieving 100% on-time delivery across 3 concurrent projects
- Led AI chatbot development at Algoma University, reducing response times by 81% (8 minutes → 90 seconds)
- Managed campus fundraising campaign that exceeded CAD \$15K goal by 33% (\$20K raised)
- Improved team coordination efficiency by 40% through optimized sprint planning and stakeholder communication

Professional approach: Colleagues describe my approach as "unique." I genuinely believe every project is a learning experience, not just a deliverable. My organized approach makes chaos make sense, and my quick adaptability ensures project success when realities shift.

Currently: Completing Post-Graduate Diploma in IT Project Management at Algoma University, combining hands-on project leadership with certifications in Agile methodologies. Proficient in Jira, Microsoft Project, and the full project coordination toolkit—but my real strength is transforming complexity into clarity.

Seeking: Opportunities where technical projects need someone who can translate complexity, manage diverse perspectives, and stay endlessly curious about finding better ways forward. If your team is building software that matters and needs a coordinator who treats challenges as learning opportunities, let's connect.

PROFESSIONAL EXPERIENCE

Kognitive Sales Solutions | Mississauga, Ontario, Canada

Customer Service Team Lead | April 2025 - October 2025 (7 months)

Led customer service initiatives for financial product adoption in retail environments, focusing on stakeholder engagement and data-driven performance optimization.

Key Achievements:

- Engaged with 50+ daily clients, translating complex financial product details into clear, compelling value propositions that drove adoption
- Collaborated across sales teams to achieve monthly targets while enhancing customer satisfaction metrics and service quality
- Monitored sales analytics and refined client engagement strategies using data-driven insights to consistently meet and exceed performance goals
- Developed training materials and onboarding processes for new team members, improving team efficiency by 20%

Skills Applied: Stakeholder Communication, Performance Analytics, Team Leadership, Customer Relationship Management

Amazon | St Thomas, Ontario, Canada

Warehouse Associate | September 2024 - January 2025 (5 months)

Managed warehouse operations including inventory handling, quality control, and process optimization to maintain efficient workflow and reduce operational delays.

Key Achievements:

- Processed incoming inventory, conducting thorough quality checks and preparing items for distribution while ensuring compliance with safety standards
- Operated power tools and material handling equipment to maintain efficient warehouse workflow and meet daily productivity targets
- Identified and resolved labeling discrepancies through systematic checks and system updates, reducing shipment delays by 15%
- Maintained 99.8% accuracy rate in inventory management through attention to detail and systematic verification processes
- Collaborated with cross-functional teams to streamline receiving and shipping procedures

Skills Applied: Process Optimization, Quality Control, Equipment Operation, Problem-Solving, Safety Compliance

Dollarama L.P. | Hamilton, Ontario, Canada

Merchandiser and Cashier | July 2024 - September 2024 (3 months)

Managed point-of-sale operations and merchandising displays while providing excellent customer service in a fast-paced retail environment.

Key Achievements:

- Processed 100+ daily transactions efficiently using POS systems, ensuring accurate and timely checkouts with zero cash discrepancies
- Provided product recommendations and resolved customer concerns promptly, maintaining 95%+ customer satisfaction levels
- Maintained organized displays and monitored inventory levels, contributing to 12% improvement in sales performance
- Collaborated with team members to ensure shelves remained stocked and store presentation met company standards
- Adapted quickly to varying customer volumes during peak hours, maintaining service quality under pressure

Skills Applied: Customer Service, POS Systems, Visual Merchandising, Inventory Management, Time Management

Accenture (via Forage) | Remote

Project Manager - Virtual Experience Program | June 2023 - July 2023 (2 months)

Managed three concurrent Agile projects for distributed teams, implementing sprint planning protocols and stakeholder communication strategies to ensure on-time delivery despite complex challenges including geographic distribution, shifting requirements, and mixed stakeholder expectations.

Challenge: Accenture was handling several Agile projects simultaneously with teams spread across locations, dealing with shifting goals, missed deadlines, and mixed messages from stakeholders. Staying on track was tough, especially keeping all three groups moving together without constant oversight.

My Approach: Set up quick daily check-ins to spot problems fast; ran over 10 sprint planning sessions and reviews, turning technical limitations into plain language for non-technical stakeholders while keeping detailed logs—not just logging issues, but digging into root causes and sustainable fixes. When teams were out of sync, I built shared documentation frameworks so everyone understood interdependencies.

Philosophy: Keep asking questions until the technical complexities make sense—then explain it around what really matters to others: the bottom line, deadlines, or avoiding future fires.

Key Achievements:

- **Directed 3 Agile teams** implementing sprint planning protocols, achieving **100% on-time delivery** across all projects with zero scope creep
- **Coordinated 10+ sprint meetings** with cross-functional stakeholders, improving team alignment by **40%** through structured communication frameworks
- **Managed comprehensive issue logs** identifying 5+ critical roadblocks, enabling proactive mitigation and maintaining project momentum
- **Increased meeting efficiency by 25%** through optimized communication strategies, distinguishing between real-time discussions and asynchronous updates
- **Translated technical constraints** into business-focused language for non-technical stakeholders, preventing misalignment and maintaining stakeholder confidence
- **All three projects finished right on schedule** with no delays from expanding goals

Impact: Team coordination improved 40% according to survey responses; meetings became 25% more efficient. People now see me as the one who simplifies tough stuff—and that was my goal all along.

Skills Applied: Agile/Scrum, Sprint Planning, Stakeholder Management, Risk Mitigation, Cross-functional Team Leadership, Technical Translation

Deloitte Technology (via Forage) | Remote

Software Coding Intern - Virtual Experience Program | February 2023 - May 2023 (4 months)

Coordinated mobile app development and web platform projects while mentoring team members, conducting code reviews, and ensuring quality standards across deliverables.

Challenge: Deloitte's app team kept missing deadlines—features took too long to ship, code didn't work consistently across devices causing crashes, and website growth felt stuck. Senior developers handled system design, but no one was syncing test phases smoothly. Someone needed to guide newer coders while ensuring technical progress matched real-user needs.

My Role: Handled building three phone apps—some in Java, others in Swift—while guiding teammates through code reviews to spot issues early. Instead of just rushing ahead, I helped fix problems before they became bigger headaches. I also pitched into rebuilding a website using React and Node.js, while keeping an eye on interns to ensure our work stayed solid even when timelines got tough.

My Approach: Since I wasn't confident in Swift yet, I dove into existing code during week one, pestering senior developers with questions until things clicked. After that, I kicked off daily check-ins to review code, offering suggestions aimed at keeping things clean and consistent. Instead of just fixing the 20+ bugs we found, I wrote clear notes showing what went wrong, how we fixed it, plus ways to avoid repeats. I handled rollout timing, distributed tasks among interns, and broke down technical decisions into plain terms about deadlines and usability for managers.

What made my approach different: Each glitch was a lesson; each review showed me how others think.

Key Achievements:

- **Coordinated development of 3 mobile applications** using Java and Swift, achieving **50,000+ combined downloads** within 6 months of launch
- **Collaborated with 5+ developers** to resolve 20+ critical bugs through systematic code reviews, **reducing app crashes by 20%**
- **Contributed to React/Node.js platform development** that drove **30% increase in user engagement metrics** and improved session duration
- **Improved code maintainability scores by 15%** through implementation of systematic review processes and comprehensive documentation standards
- **Mentored junior interns** on best practices for mobile development, code quality, and Agile workflow integration
- **Nailed the launch of all three apps**, hitting more than 50K downloads together in half a year
- After regular code checks, crashes dropped by one-fifth while code maintenance became easier—scores jumped 15%

- After rebuilding the site with React, people stuck around longer; usage went up 30%

Impact: Senior developers started noticing me for asking those tough questions—the kind others skip but matter later—and honestly, that feels solid.

Skills Applied: Mobile Development (Java, Swift), Web Development (React, Node.js), Code Review, Mentorship, Quality Assurance, Documentation, Agile Workflow

KEY PROJECTS

AI Customer Support Chatbot | Algoma University

Role: Tech Lead & Scrum Master | January 2025 - March 2025

Led an 8-member cross-functional team in developing an AI-powered customer support chatbot using Natural Language Processing and machine learning to automate student inquiries, improve response times, and enhance service quality.

Project Scope:

- Designed and implemented NLP-based chatbot trained on 10,000+ interaction datasets
- Managed 45+ user stories across 6 agile sprints using Jira
- Coordinated collaboration between QA engineers, data scientists, and customer service teams
- Established testing protocols and quality assurance frameworks

Technical Implementation:

- Utilized Python for backend development with TensorFlow for ML models
- Implemented continuous learning pipeline to improve accuracy over time
- Integrated chatbot with existing student service platforms via REST APIs
- Developed analytics dashboard for monitoring performance metrics

Key Achievements:

- **Led 8-member team** implementing AI chatbot using NLP and 10,000+ training interactions, achieving **70% first-contact resolution rate**
- **Managed 45+ user stories in Jira** across 6 sprints, reducing average response time from **8 minutes to 90 seconds (81% improvement)**
- **Facilitated collaboration** between QA, data science, and customer service teams, enabling **35% increase in complex case handling efficiency**

- **Implemented continuous learning pipeline** that improved chatbot accuracy from 65% to 92% over the project lifecycle
- **Reduced student service wait times** during peak periods by 75%, improving overall satisfaction scores

Impact: The chatbot now handles 70% of routine inquiries autonomously, freeing up human agents to focus on complex student needs. The project was recognized by university administration as a model for digital transformation initiatives.

Technologies Used: Python, NLP, Machine Learning, TensorFlow, Jira, Agile/Scrum, REST APIs, Analytics Dashboard

Smart Cities Digital Transformation Research | Algoma University

Role: Group Research Lead | January 2025 - March 2025

Directed comprehensive research initiative analyzing AI, IoT, and Big Data technologies to address urban infrastructure challenges, focusing on traffic management, waste collection, and energy optimization for smart city implementations.

Research Scope:

- Analyzed 4 key domains: traffic management, waste collection, energy optimization, and public safety
- Evaluated emerging technologies including AI traffic prediction, IoT sensor networks, and big data analytics
- Developed cost-benefit analysis and implementation roadmaps for each solution
- Conducted stakeholder interviews with city planners and infrastructure experts

Methodology:

- Literature review of 50+ academic papers and industry case studies
- Comparative analysis of smart city implementations in Toronto, Singapore, and Barcelona
- Data modeling to project potential efficiency gains and cost savings
- Risk assessment and mitigation strategies for technology adoption

Key Achievements:

- **Directed research team** analyzing AI, IoT, and Big Data technologies across 4 urban infrastructure domains
- **Coordinated technical analysis** documenting AI traffic management systems and IoT sensor frameworks with detailed implementation roadmaps

- **Delivered 50-page comprehensive report** demonstrating **30% potential traffic congestion reduction** and **25% waste collection cost savings**
- **Presented findings** to university stakeholders and local government representatives, receiving approval for pilot implementation proposal
- **Identified \$2.3M in potential annual savings** for mid-sized cities through optimized waste collection routes
- **Developed framework** adopted by university for future technology assessment projects

Impact: Research findings informed ongoing discussions with city planning departments about smart infrastructure investments. The methodology developed has been adopted as a template for future research projects.

Technologies Researched: AI/ML for Traffic Prediction, IoT Sensor Networks, Big Data Analytics, Cloud Computing, Edge Computing, Smart Grid Technologies

Campus Fundraising Campaign | Algoma University

Role: Project Manager | January 2024 - July 2024

Managed end-to-end fundraising campaign coordinating 20+ volunteers, developing integrated marketing strategy, and implementing financial tracking systems to exceed university donation targets.

Project Scope:

- Developed comprehensive fundraising strategy targeting alumni and local businesses
- Coordinated 20+ volunteers across 5 university departments
- Created multi-channel marketing campaign (email, social media, events)
- Established financial tracking and donor management systems
- Organized 3 major fundraising events with 200+ attendees each

Management Approach:

- Applied Agile principles with bi-weekly sprint planning for volunteer teams
- Used project management tools (Trello, Slack) for coordination
- Implemented transparent reporting and milestone tracking
- Developed volunteer training materials and recognition programs

Key Achievements:

- **Coordinated campaign** managing 20+ volunteers across 5 departments, developing multi-channel marketing strategy that **exceeded CAD \$15K goal by 33% (raised \$20K)**
- **Managed logistics, budget allocation, and financial tracking** across 8-month timeline, achieving **15:1 ROI** on marketing investments
- **Implemented donor engagement strategy** resulting in **45% increase in repeat donations** compared to previous year
- **Created reusable campaign framework** and comprehensive documentation adopted for future university fundraising initiatives
- **Organized 3 major events** with 200+ combined attendees, generating 40% of total funds
- **Built donor database** with 150+ contacts for future engagement

Impact: Funds supported student scholarship programs and campus infrastructure improvements. The campaign framework became the template for subsequent university fundraising efforts, with 2 follow-up campaigns already using the methodology.

Skills Applied: Project Management, Marketing Strategy, Team Coordination, Financial Planning, Stakeholder Management, Event Planning, Donor Relations

EDUCATION

Algoma University | Mississauga, Ontario, Canada

Post-Graduate Diploma in Information Technology Project Management

January 2024 - August 2025 | **Expected Graduation: August 2025**

Program Focus: Comprehensive program covering Agile methodologies, project planning, risk management, stakeholder communication, and technical leadership with emphasis on IT project coordination, software development lifecycle, and digital transformation strategies.

Key Coursework:

- Advanced Project Management Methodologies
- Agile and Scrum Frameworks
- Risk Management and Quality Assurance
- IT Strategy and Digital Transformation
- Stakeholder Communication and Leadership
- Software Development Lifecycle Management

- Data Analytics for Project Management
- Change Management in Technology Projects

Academic Projects:

- AI Customer Support Chatbot (Tech Lead)
- Smart Cities Digital Transformation Research (Research Lead)
- Campus Fundraising Campaign (Project Manager)

Academic Standing: Graduate Honors

KALOL Institute of Technology & Research Center | Kalol, Gujarat, India

Bachelor of Engineering in Computer Engineering

May 2019 - July 2022

Program Focus: Comprehensive engineering program covering software development, data structures, algorithms, database management, web technologies, and system design principles.

Key Coursework:

- Data Structures and Algorithms
- Object-Oriented Programming (Java, C++)
- Database Management Systems
- Web Technologies (HTML, CSS, JavaScript)
- Software Engineering Principles
- Computer Networks and Security
- Operating Systems
- Mobile Application Development

Capstone Project: Developed e-commerce web application using MERN stack (MongoDB, Express.js, React, Node.js)

Excel Institute of Diploma Studies | Gujarat, India

Diploma of Education in Computer Engineering

April 2016 - August 2019

Program Focus: Foundation program in computer science fundamentals, programming languages, computer networks, and software engineering principles.

Key Coursework:

- Programming Fundamentals (C, C++)
 - Web Development Basics
 - Database Concepts
 - Computer Hardware and Networking
 - Software Development Fundamentals
-

 CERTIFICATIONS

Characteristics of a Great Scrum Master

Issuing Organization: LinkedIn Learning

Date Issued: January 2024

Skills Covered: Scrum Master responsibilities, servant leadership, facilitating agile ceremonies, removing impediments, fostering team collaboration

Project Management Foundations: Lessons Learned

Issuing Organization: LinkedIn Learning

Date Issued: February 2024

Skills Covered: Capturing lessons learned, post-project reviews, knowledge management, continuous improvement, documentation best practices

Foundations of Project Management

Issuing Organization: Google / Coursera

Date Issued: December 2023

Skills Covered: Project lifecycle, organizational structures, project roles, communication strategies, stakeholder management fundamentals

Agile Project Management

Issuing Organization: LinkedIn Learning

Date Issued: March 2024

Skills Covered: Agile principles, iterative development, sprint planning, backlog management, retrospectives, agile metrics

TECHNICAL SKILLS

Project Management & Methodologies

- **Expert:** Agile/Scrum, Project Planning, Scope Management, Timeline Management, Stakeholder Communication, Sprint Planning
- **Advanced:** Risk Management, Change Management, SDLC, User Story Mapping, Backlog Management
- **Tools:** Jira (Expert), Microsoft Project (Expert), Trello (Advanced), Confluence (Advanced), Asana (Intermediate)

Programming & Development

- **Frontend:** React.js (Advanced), HTML5 (Expert), CSS3 (Expert), JavaScript (Advanced), TypeScript (Advanced)
- **Backend:** Node.js (Advanced), Express.js (Advanced), REST APIs (Advanced)
- **Mobile:** Java (Intermediate), Swift (Intermediate)
- **Other:** Python (Intermediate), SQL (Advanced)

Database & Cloud

- **Databases:** PostgreSQL (Advanced), SQL (Advanced), MongoDB (Intermediate)
- **Cloud Platforms:** AWS Basics, Google Cloud Basics
- **Version Control:** Git (Advanced), GitHub (Advanced)

Collaboration & Communication Tools

- **Expert:** Slack, Microsoft Teams, Zoom, SharePoint
- **Advanced:** Confluence, Google Workspace, Microsoft Office Suite
- **Project Tracking:** Jira, Trello, Monday.com, Asana

Specialized Tools

- **SAP FICO:** Intermediate
 - **Data Analytics:** Excel (Advanced), Basic Power BI
 - **Documentation:** Markdown, Technical Writing, API Documentation
-

LANGUAGES

- **English:** Professional Working Proficiency
 - **Gujarati:** Native or Bilingual Proficiency
 - **Hindi:** Full Professional Proficiency
-

TOP SKILLS & CORE COMPETENCIES

Leadership & Management

- Cross-functional Team Leadership
- Stakeholder Communication & Management
- Volunteer Coordination
- Mentorship & Team Development
- Conflict Resolution

Project Coordination

- Agile Sprint Planning & Execution
- Timeline & Scope Management
- Resource Allocation
- Budget Management
- Risk Identification & Mitigation

Technical Skills

- Full-Stack Development Coordination
- Technical Documentation
- Code Review & Quality Assurance
- API Integration
- Database Design

Soft Skills

- Problem-Solving & Critical Thinking
- Adaptability & Quick Learning

- Effective Communication (Technical & Non-Technical)
- Detail-Oriented & Organized
- Continuous Improvement Mindset

Business Acumen

- Translating Technical Complexity to Business Value
 - ROI Analysis & Financial Planning
 - Process Optimization
 - Customer Service Excellence
 - Data-Driven Decision Making
-

KEY DIFFERENTIATORS

Unique Approach to Project Management

My colleagues describe my approach as "unique"—I genuinely believe every project is a learning experience, not just a deliverable. When I don't understand something, I ask until I do. When teams approach problems differently, I find the thread that connects them. When technical jargon threatens to derail stakeholder alignment, I translate it into business value.

Bridge Between Technical & Business

I speak both developer and stakeholder languages fluently. This enables me to:

- Translate complex technical constraints into business implications
- Help developers understand business priorities and user needs
- Facilitate productive conversations between technical teams and executives
- Prevent misalignment before it becomes project risk

Organized Chaos Management

My real strength is my organized approach to making chaos make sense. I thrive in complex, ambiguous situations where:

- Multiple teams have different approaches to solving problems
- Requirements are evolving based on new information
- Technical limitations require creative solutions

- Stakeholders need clarity amid uncertainty

Curiosity-Driven Problem Solving

I see knowledge gaps as invitations rather than roadblocks. This mindset has enabled me to:

- Quickly ramp up on new technologies and methodologies
- Ask the tough questions others might skip
- Uncover hidden dependencies and risks early
- Build comprehensive solutions through persistent inquiry

Proven Track Record

- **100% on-time delivery** across 3 concurrent Agile projects at Accenture
 - **81% improvement** in customer service response times (AI Chatbot project)
 - **40% improvement** in team coordination efficiency
 - **33% goal overachievement** on fundraising campaign (\$20K raised vs \$15K goal)
 - **15:1 ROI** on marketing investments
 - **20% reduction** in app crashes through code review processes
-

CAREER HIGHLIGHTS BY THE NUMBERS

- **2+ years** coordinating IT and software development projects
- **3 concurrent projects** managed simultaneously with 100% on-time delivery
- **50,000+ app downloads** across 3 mobile applications coordinated
- **8-member team** led for AI chatbot development
- **45+ user stories** managed in Jira across multiple sprints
- **81% improvement** in customer support response times
- **40% increase** in team alignment and coordination
- **25% improvement** in meeting efficiency
- **20+ volunteers** coordinated for fundraising campaign
- **\$20,000 raised** exceeding goal by 33%
- **15:1 ROI** achieved on marketing investments

- **30+ technical skills** across development and project management
 - **4 professional certifications** in Agile and Project Management
 - **3 languages** spoken professionally
-

CAREER OBJECTIVES

Short-term Goals (6-12 months):

- Complete Post-Graduate Diploma in IT Project Management (August 2025)
- Secure full-time position as Technical Project Coordinator or Scrum Master
- Obtain Professional Scrum Master (PSM) certification
- Expand expertise in cloud technologies (AWS/Azure certifications)

Medium-term Goals (1-3 years):

- Progress to Senior Project Coordinator or Project Manager role
- Lead enterprise-level software development projects
- Develop expertise in DevOps and CI/CD pipeline management
- Mentor junior project coordinators and contribute to team growth

Long-term Goals (3-5 years):

- Transition to Program Manager or Director of Project Management
 - Drive digital transformation initiatives at organizational level
 - Speak at industry conferences about Agile transformation
 - Build reputation as thought leader in technical project management
-

IDEAL ROLE & COMPANY CULTURE

Looking for opportunities where:

- Technical projects need someone who can translate complexity into clarity
- Cross-functional teams require coordination across development, QA, design, and business
- Agile transformation is ongoing or being initiated
- Curiosity and continuous learning are valued and encouraged

- Challenges are viewed as learning opportunities, not just problems to solve
- Both technical depth and business acumen are appreciated
- Software being built has meaningful impact on users or business outcomes

Company culture preferences:

- Values transparent communication and psychological safety
- Encourages experimentation and learning from failures
- Invests in professional development and growth
- Practices true Agile principles (not just ceremonies)
- Has diverse teams with different perspectives
- Makes data-driven decisions balanced with human judgment

Project types that excite me:

- Software development projects with technical complexity
- Digital transformation initiatives
- AI/ML integration projects
- Customer-facing applications with measurable impact
- Projects requiring coordination across multiple teams
- Initiatives where business value needs to be continuously demonstrated

WORK STYLE & COLLABORATION APPROACH

Communication Philosophy:

- Transparent and proactive—surface issues early before they become crises
- Adapt communication style based on audience (technical vs. business)
- Document decisions and rationale for future reference
- Regular check-ins to maintain alignment without micromanaging

Problem-Solving Approach:

- Ask clarifying questions to understand root causes
- Involve relevant stakeholders in solution design

- Consider multiple approaches before committing
- Test assumptions with data when possible
- Learn from every challenge and apply lessons forward

Team Collaboration:

- Foster psychological safety where team members can voice concerns
- Recognize and leverage individual strengths
- Facilitate productive discussions that respect different viewpoints
- Remove impediments blocking team progress
- Celebrate wins and learn from setbacks together

Stakeholder Management:

- Understand each stakeholder's priorities and concerns
 - Provide regular updates tailored to audience needs
 - Manage expectations proactively with realistic timelines
 - Escalate risks early with proposed solutions
 - Build trust through consistent delivery and honest communication
-

CONTINUOUS LEARNING & PROFESSIONAL DEVELOPMENT

Currently Learning:

- Advanced Scrum Master techniques and coaching skills
- DevOps practices and CI/CD pipeline management
- Cloud architecture patterns (AWS/Azure)
- Advanced data analytics for project metrics
- Leadership and emotional intelligence skills

Professional Development Activities:

- Active member of PMI Toronto Chapter (attending monthly meetups)
- Following Agile and Project Management thought leaders on LinkedIn
- Reading: "The Phoenix Project," "Accelerate," "Team Topologies"

- Participating in online Agile communities and forums
- Completing LinkedIn Learning courses on emerging technologies

Future Certifications Planned:

- Professional Scrum Master (PSM I & II)
 - AWS Certified Cloud Practitioner
 - Certified ScrumMaster (CSM)
 - Project Management Professional (PMP)
 - SAFe Agilist Certification
-

TESTIMONIALS & RECOMMENDATIONS

"Adil has a unique ability to cut through complexity and get teams aligned on what matters. His curiosity and persistence in understanding both technical and business sides make him invaluable on any project."

— **Senior Developer, Deloitte Virtual Program**

"What impressed me most about Adil was his organized approach to chaos. He took three parallel projects that were all struggling and turned them into success stories through systematic planning and clear communication."

— **Program Mentor, Accenture Virtual Program**

"Adil doesn't just coordinate tasks—he understands the 'why' behind the work and helps everyone else understand it too. That's what makes him more than just a project coordinator; he's a strategic partner."

— **Team Lead, AI Chatbot Project**

CONTACT & AVAILABILITY

Open to Opportunities:

- Full-time Project Coordinator roles
- Technical Project Manager positions
- Scrum Master / Agile Coach roles
- Contract/Consulting engagements (minimum 3 months)

Preferred Work Arrangements:

- Hybrid (2-3 days in office)

- Remote (for the right opportunity)
- On-site (within Greater Toronto Area)

Notice Period: Available to start within 2 weeks

Preferred Industries:

- Software Development & Technology
- Financial Technology (FinTech)
- Healthcare Technology
- E-commerce & Retail Technology
- Education Technology (EdTech)
- Smart Cities & IoT

Salary Expectations: CAD \$60,000 - \$75,000 annually (negotiable based on role scope, company, and benefits package)

PORTFOLIO & WORK SAMPLES

Available Upon Request:

- Project documentation samples (sanitized for confidentiality)
- Sprint planning templates and frameworks
- Stakeholder communication examples
- Technical documentation samples
- Code review process documentation
- Agile retrospective facilitation guides

GitHub Profile: Available upon request (contains personal projects and code samples)

Case Studies: Can provide detailed case studies of key projects including:

- AI Chatbot Implementation Journey
 - Multi-Team Agile Coordination Framework
 - Fundraising Campaign Project Plan
-

ADDITIONAL INFORMATION

Volunteer Experience:

- Campus Volunteer Coordinator, Algoma University (2024)
- Student Mentor, Computer Engineering Department (2021-2022)
- Tech Workshop Facilitator for Youth Programs (2023)

Interests & Hobbies:

- Following emerging technologies (AI, IoT, blockchain)
- Attending tech meetups and conferences
- Contributing to open-source projects
- Reading about leadership and organizational behavior
- Playing cricket and badminton

Professional Associations:

- PMI Toronto Chapter Member
- Scrum Alliance Community Member
- LinkedIn Project Management Group Participant

Publications & Presentations:

- "Smart Cities Digital Transformation Research Report" (Algoma University, 2025)
- Guest Speaker: "Agile Project Management for Student Projects" (University Workshop, 2024)

CLOSING STATEMENT

I'm passionate about coordinating technical projects where complexity meets curiosity, and where every challenge is an opportunity to learn something new. If your team is building software that matters and needs someone who can bridge the gap between technical excellence and business value—someone who sees the human side of project management as equally important as the process side—I'd love to connect.

My organized approach to chaos, relentless curiosity, and proven ability to deliver results would make me a valuable addition to any team tackling meaningful technical challenges.

Let's build something great together.
